#### Automatic white balance circuit

The automatic white balance circuit compensates for the beam distortion, secular distortion of the cathode-ray tube, etc., and always reproduces the same white display on the screen. This allows an extended use of the monitor.

#### Super Fine Pitch Trinitron picture tube

(PVM-1444QM/1442QM only)

The Super Fine Pitch Trinitron picture tube (0.25 mm aperture grill) gives high resolution picture. Horizontal resolution is more than 600 TV lines at the center of the picture. When used as a character display, up to 2,000 characters (80 characters/line × 25 lines) can be displayed with great clarity.

#### Analog RGB/component connector (PVM-1444QM only)

Analog RGB and component signals of a video equipment can be input through this connector. The signals are selected by the COMPO/RGB selector on the rear panel.

#### Analog RGB connector (PVM-1442QM only)

Analog RGB signal of a video equipment can be input through this connector.

#### Digital RGB input connector (PVM-1442QM only)

Digital RGB signal from a microcomputer can be input through this connector.

#### Y/C input connector

The video signal split into the chrominance signal (C) and the luminance signal (Y) can be input through this connector, eliminating the interference between the two signals which tends to occur in a composite video signal and assuring the video quality.

#### VTR input connector

When connected to a VTR having the 8-pin TV connector, video and audio signals can be fed through this connector with a single cable.

#### Control S connector (except PVM-1440QM)

When this connector is connected to the "control S" output of other equipment, the remote controls of the aperture, brightness, chroma, phase, contrast and volume settings are possible.

#### Automatic release of BNC-type connector termination

The BNC-type input connector is terminated at 75 ohms inside when the BNC-type output connector is open. When a cable is connected to the BNC-type output connector, the 75-ohm termination is automatically released, and the signal input through the IN connector is output from the corresponding OUT connector.

#### Four color systems available

The monitor can display PAL, SECAM, NTSC<sup>3.58</sup> and NTSC<sup>4.43</sup> signals. The appropriate color system is selected automatically.

\* A signal of NTSC<sup>4.43</sup> is obtained by playing back NTSC-recorded video cassettes with a video tape recorder/player especially designed for use with this system.

#### Comb Filter

When NTSC video signals are received, a comb filter activates to increase the resolution, resulting in fine picture detail without color spill or color noise.

#### Blue only mode

In the blue only mode, an apparent monochrome display is obtained with all three cathodes driven with a blue signal. This facilitates color saturation and phase adjustments and observation of VTR noise.

#### Underscan mode (except PVM-1440QM)

The signal normally scanned outside of the screen can be monitored in the underscan mode.

#### Note

The bright scanning lines which may appear on the top edge of the screen when the monitor is in the underscan mode are caused by an internal test signal, rather than the input signal.

#### Horizontal/vertical delay mode (except PVM-1440QM)

The horizontal and vertical sync signals can be checked simultaneously in the H/V delay mode.

#### External sync input (except PVM-1440QM)

When the EXT SYNC (or ANALOG/DIGITAL (EXT SYNC)) button is depressed, the monitor can be operated on the sync signal supplied from an external sync generator.

#### Color temperature selector

Color temperature of either 9,300°K or 6,500°K is selectable with the COLOR TEMP selector. For precise adjustment, use the BIAS and GAIN adjustment controls (except PVM-1440QM).

#### Light-touch picture adjustment buttons (except PVM-1440QM)

The aperture, brightness, chroma, phase, contrast and volume buttons can be adjusted by touching the buttons lightly. The adjusted settings will be stored in memory even when the monitor is turned off.

#### AV (EURO-TV) connector (PVM-1440QM only)

Analog RGB signals can be input through the 21-pin AV (EURO-TV) connector. This allows connection of peripheral equipments such as decoders.

#### Superimposition (PVM-1440QM only)

The data fed through the AV (EURO-TV) connector can be superimposed on the picture from the LINE A, LINE B or Y/C/VTR input.

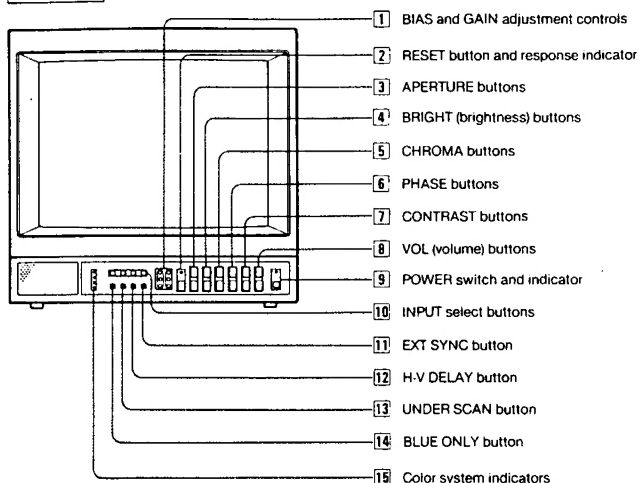

#### EIA standard 19-inch rack mounting

By using an optional MB-502A mounting bracket, the monitor can be mounted in an EIA standard 19-inch rack. An optional SLR-102 slide rail is also available. For details on mounting, see the appropriate instruction manual.
